PDF Stamping

Appligent's PDF Stamping products offer a robust set of features for adding content to documents after they have been created. Stamping can be used to add watermarks, disclaimers, or document control data like Bates numbers, time/date stamps or status information. Adding local contact information can customize existing marketing flyers. Digitized signatures can be applied to cover letters to further personalize the documents.

StampPDF Batch

StampPDF Batch is a powerful command-line server application that stamps custom text and images into a single or multiple PDF documents. It can also run as a Web Service when used in conjunction with our APConductor. Engineered for high volume, unattended environments, StampPDF Batch will place content into documents in any orientation and in any Type 1 typeface.

- Support for Unicode fonts
- Bates numbering
- Encrypt and linearize output
- Over 30 built-in stamping variables
- Multi format image stamping

Price: \$1995.00 (USD) per server. Development licenses are available at a 50% discount.

StampPDF

StampPDF is a plug in for Adobe Acrobat that offers most of the functionality of StampPDF Batch. It does not include some of the sophisticated image handling functions but still offers a rock solid stamping engine.

- Bates numbering
- Watermarks
- Flexible page numbering options
- Over 30 built-in stamping variables
- Compatible with Acrobat 5 and 6
- Dynamic date and time stamping

Price: \$179 (USD) per user
