Starting at only \$139.95 (Personal Edition)

CodeCharge Studio is the most productive solution for visually creating database-driven Web applications without coding. The support for virtually all databases, web servers and web technologies makes CodeCharge Studio one of a kind. It is a complete solution available for Web development.

Whether you are a legacy developer, MS Access programmer or experienced Web engineer, you can use CodeCharge Studio to rapidly develop anything from simple database-driven Web applications to complex e-business solutions.

The included Application Builder instantly converts your database (MS Access, MS SQL, MySQL, Oracle, etc.) into a working Web application with login-protected user access to database search, list, view and update functions.

Also included is CodeCharge Studio Add-In for FrontPage - the first product that extends FrontPage functionality into a full-featured, integrated web development environment that makes it fast and easy to create database-enabled web sites.
